Reference Admin Recommendation No. 373

Recommended:

****MARPOL Annex I Regulation 12 Oil residues (sludge) systems****
Existing ships (including offshore units) of 400 gross tons and above constructed before 1 January 2017 are prohibited to have discharge connections from the oil residue (sludge) system to the oily bilge water holding tank(s), tank top or oily water separators.
Additionally, the common piping leading to the standard discharge connection (MARPOL I Regulation 13) used by the sludge system and the bilge systems shall not allow for the transfer of sludge to the bilge system.
The attending surveyor is to verify that:
1. There are no interconnections between the sludge system and either the bilge system, oily bilge water holding tank(s), tank top or oily water separators; and
2. There is no capability onboard to transfer sludge to the bilge system using the common piping leading to the standard discharge connection.
If modifications to the sludge system would be necessary to comply with the above new requirement, details of the modification would need to be submitted to an ABS Engineering office. Under MEPC.1/Circ. 753/Rev. 1, a screw-down non-return valve provides a means of separation equivalent to an arrangement that has "no interconnection" or "no discharge connections." In addition, a combination of a separate isolation valve and a non-return valve would be acceptable.
In all cases, the surveyor will check for full compliance at the first IOPP renewal survey carried out on or after 1 January 2017.
For further details, refer to the Chief Surveyors letter "MARPOL Annex I Regulation 12 Oil residues (sludge) systems", dated 08 April 2016 and which is located in QMX.

Recommended:

SLE / Firefighters two-way portable radiotelephone apparatus
The Surveyor is to confirm at the next scheduled Safety Equipment survey on or after 1 July 2018,
that Under SOLAS Chapter II-2, Regulation 10.10.4, ships constructed before 1 July 2014 are to carry on board a minimum of two two-way portable radiotelephone apparatus for each fire party for fire-fighter's communication.
Those two, two-way radiotelephone apparatus shall be of an explosion-proof type or intrinsically safe.
These requirements shall be complied with not later than the first Safety Equipment survey after 1 July 2018.
